

Question 1:

Refer to the table below, write a SQL query to find out employees who earn more than their managers.

```

+---+---+---+---+
| Id | Name | Salary | ManagerId |
+---+---+---+---+
| 1  | Joe  | 70000  | 3          |
| 2  | Henry| 80000  | 4          |
| 3  | Sam  | 60000  | NULL       |
| 4  | Max  | 90000  | NULL       |
+---+---+---+---+

```

Question 2:

You're give two set of version numbers, compare them.

The . character does not represent a decimal point and is used to separate number sequences.

If version1 > version2 return 1, if version1 < version2 return -1, otherwise return 0.

You may use any programming language / pseudo-code.

Input: 1.3 | 3.1

Input: 2.12.1 | 2.3

Input: 3.1.34 | 3.1.2

Question 3:

Use the input of array provided below and provide the output as shown by using for loop. You may use any programming language / pseudo-code.

Input: [0,1,2,4,5,7]

Output: ["0->2","4->5","7"]

Input: [0,2,3,4,6,8,9]

Output: ["0","2->4","6","8->9"]
